

Research Methods in Second Language Acquisition

Course description

The course presents a general perspective of the research methods commonly employed in second language acquisition. Students are introduced to the quantitative and qualitative paradigms and are made familiar with the main study types within these two paradigms (quasi-experimental, relational, case study, ethnographic, etc). Students also learn about a range of instruments used in data collection and have a chance to have some practical experience. The course will make it easier for students to better understand the studies that they will need to read in other courses of the programme. More specifically, it will help them develop critical reading skills in order to be able to identify weaknesses and strengths in empirical research.

Syllabus

1. Introduction to research
 - Types of studies (exploratory, review, methodological, empirical, etc)
 - Introduction to qualitative and quantitative research
 - The abstract and sections in a research report
 - Introduction to bibliographic resources
2. Quantitative research
 - Main components
 - Research design
 - (Quasi)experimental and non-experimental research
 - Internal and external validity
 - Overview of statistical tests
3. Qualitative research
 - Basic research
 - Case study research
 - Ethnography
 - Conversation analysis
 - Standards of quality
4. Instruments
 - Validity and reliability
 - Surveys and Interviews
 - Introspective methods
 - Measurement of proficiency
 - Psycholinguistic techniques

Methodology

- Short lectures
- Class discussion
- Practice activities

Students are expected to do two weekly readings and answer a number of questions.

Evaluation

- Practical exercises and assignments 50%
- Final exam (25% individual; 25% in pairs and based on evaluation of two empirical studies)
